Scoring Instructions for the Vanderbilt Assessment Scale—Parent Informant

The Vanderbilt Assessment Scale has two components: symptom assessment and impairment of performance.

For the **ADHD screen**, the symptoms assessment component screens for symptoms that meet the criteria for both inattentive (items 1-9) and hyperactive-impulsive ADHD (items 10-18). To meet *DSM-IV* criteria for the diagnosis of ADHD, one must have at least 6 responses of "Often" or "Very Often" (scored 2 or 3) to either the 9 inattentive or 9 hyperactive-impulsive items, or both and a score of 4 or 5 on any of the Performance items (48-55). There is a place to record the number of symptoms that meet this criteria in each subgroup.

The Vanderbilt Assessment Scale also contains items that screen for 3 other co-morbidities: oppositional defiant disorder, conduct disorder, and anxiety/depression.

For the **oppositional defiant disorder screen** there must be a score of 2 or 3 on 4 of the 8 items (19-26) on the subscale and a score of 4 or 5 on any of the Performance items (48-55).

For the **conduct disorder screen** there must be a score of 2 or 3 on 3 out of the 14 items (27-40) on this subscale and a score of 4 or 5 on any of the Performance items (48-55).

For the **anxiety/depression screen** there must be a score of 2 or 3 on 3 of the 7 items (41-47) and a score of 4 or 5 on any of the Performance items 48-55).

The Vanderbilt Assessment Scale should NOT be used alone to make a diagnosis. The practitioner must consider information from other sources.
